These FAQs are designed to answer questions about MyEMCert modules. **PLEASE NOTE:** MyEMCert will not be visible on your ABEM Personal Page until it launches in spring 2021.

1. **How will the introduction of MyEMCert affect my recertification?** MyEMCert will affect physicians differently depending on the year their current certification expires. View ABEM requirements based on when your current ABEM certification expires using our ✔️ ABEM Reqs tool.

   If you still have questions, contact ABEM at staycertified@abem.org or 517.332.4800, ext. 317.

2. **How do I get started with MyEMCert?** Instructions for accessing MyEMCert, informed and shaped by the experience of pilot participants, will be sent to ABEM-certified physicians in spring 2021. You will not see any reference to MyEMCert in your secure portal until it launches in 2021.

3. **How much will MyEMCert cost?** The exact cost for MyEMCert has not been determined, but ABEM is working to make sure continuing certification costs do not increase. With the introduction of MyEMCert, however, ABEM has eliminated several elements from the continuing certification process that historically have cost emergency physicians additional money.

4. **What happens to the ConCert Exam?** ABEM will no longer offer the ConCert Exam after 2022. Through a series of interviews, surveys, and focus groups, Emergency Medicine physicians conveyed that they wanted a continuing certification process that is relevant to their practice, simple to understand, and easy to manage. MyEMCert was designed to accommodate those preferences.

5. **How can I prepare for taking a MyEMCert Module?** MyEMCert modules are designed to promote learning while physicians are engaged in the module. The Core Knowledge section makes up approximately 80 percent of each module. Modules are open book, so information to help physicians answer any questions they have will be readily available by looking up the topic using standard resources available in daily clinical practice. Physicians may choose not to study; others might want to refresh on content for some modules, recognizing that the modules are based on the patient’s presentation. To get a general description of content that could be assessed in the modules, please visit the ABEM website (https://www.abem.org/public/stay-certified/myemcert/module-content).

   The key advance section of each module makes up approximately 20 percent of each module. This section is designed to accelerate the pace at which practice advances, clinical policy alerts, and suggestions from the literature are incorporated into emergency physicians’ clinical practice. Synopses of key advances are available on the ABEM website (https://www.abem.org/public/stay-certified/myemcert/key-advances) for physicians to read prior to taking a module. The synopses include citations for additional reading for physicians who wish to explore the topics further. The synopsis for the topic can be accessed while taking the module.
6. **I took the abdominopelvic module, and there was a key advance question about HEART Score, which is not related to an abdominopelvic presentation. Why was it there?** Each MyEMCert module consists of presentation-based scenarios, which include questions related to the module topic, and key advances. Key advances in each module will not necessarily share the same topic as the module.

7. **What do I do if I need to stop in the middle of the module? Will I be able to come back?** There is a Pause button on the top right of the screen. You will receive a warning message when you press the button to explain what will happen. If you choose to leave without confirming an answer, you will not be able to return to this question and it will be scored as incorrect. When you re-enter the module, you will see the next question. If you confirm an answer now, you will see the feedback on your answer and will then be able to leave without penalty.
